REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Boll et al. (USP 5,788,597) is considered to be the most pertinent prior art. Boll et al. show a method to control a braking system in figure 2, comprising: detecting a braking demand in box 201, since box 209 states that "transmit regenerative current to generator and battery", it is deduced that the battery has been isolated from the being charged in the previous steps until box 209; in box 202, ABS is being checked to see if ABS is active or not, it is inherent that a wheel speed is being detected in an anti-locking brake system. However, Boll lacks the checking of the voltages of the battery and the generator in order to charge the battery from the generator. This claimed feature of comparing the voltages and charging the battery from the generator depending on the result of the comparison defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
